

METHOD AND EQUIPMENT FOR TAIL THREADING IN THE DRYER
SECTION OF A PAPER MACHINE OR A SIMILAR MACHINE

Abstract

5

A method and equipment for tail threading in a paper machine in which tail threading is carried out in stages:

- the web is guided to the broke treatment at a selected
10 dryer,
- a cut is formed in the web to separate a narrow tail from the rest of the web, i.e. the broke web, prior to the dryer,
- the edge opposite to the cut of the broke web is
15 turned away from the cutting point to form an open draw between the tail and the broke web,
- the tail is guided from the selected dryer to the following section while the broke web is transferred further to the broke treatment,
- 20 - while travelling in a controlled manner, the tail is widened to the full width and the broke web is simultaneously reduced away.
